

FROSTWOOD EXPRESS

A FREE PRINTABLE SAMPLE • WITH ANSWERS

WHAT'S INSIDE

- How to play Train Tracks
- Four Easy puzzles (No. 1 to 4)
- Two Medium puzzles (No. 51 and 52) and one Hard (No. 101)
- Answer pages (they also show a few puzzles not in this sample)

HOW TO PRINT

- US Letter paper, portrait.
- Choose “Actual size” or “Fit”.
- Grab a pencil and an eraser.
- Answers are at the back. No peeking!

ENJOYED THESE PUZZLES?

The full book, Frostwood Express, is a paperback on Amazon.

BEFORE YOU BOARD

HOW TO PLAY

Each puzzle is a map of a stretch of line, drawn as a grid of squares. Your job is to lay **one continuous railway track** through the grid, square by square, following these rules:

- * The track enters the grid at **A**, on the left edge, and leaves it at **B**, on the bottom edge.
- * Every square is either **track** or **empty**. A track square holds a straight piece or a curve: it joins exactly two of its four sides. The track never branches, never crosses itself and never forms a closed loop.
- * The number above each column and beside each row tells you **how many squares** in that column or row contain track.
- * Some pieces of track are already laid for you. They are part of the answer, exactly as drawn.
- * Track squares may sit side by side without being joined. Only the pieces you draw connect them.

Useful Tricks

- * **Full and finished lines.** When a row or column already has as many track squares as its number, mark every other square in it with a small x. When it has only just enough undecided squares left, they must all be track.
- * **Dead ends.** A track square needs two exits. If a square can reach only one neighbour that is not ruled out, it cannot be track.
- * **No loops, no shortcuts.** Never join two ends of the same piece of track. And don't join the piece that starts at A to the piece that ends at B until every row and column total is met.
- * **The crossing rule.** Draw an imaginary line between two neighbouring columns. The track starts on the left of it at A. If B is on the right, the track must cross that line an *odd* number of times; if B is on the left, an *even* number. The same works between two rows: the crossings are odd if A is above the line and even if A is below it. When all the crossings but one are known, the last one is decided.
- * **What if?** In the Expert puzzles, you may have to suppose a square is track, follow the consequences, and see the rules break. Then you know that square is empty.
