Welcome to Lantern Lane, a small village with a bake sale every winter, a pond for skating and a lamp at every gate. Each puzzle is a little scene from village life. Match everyone to the right things using the clues and the grid. Every puzzle has exactly one answer, and you can always reach it by reasoning alone. No guessing is needed.

BEFORE YOU BEGIN

HOW TO SOLVE

Each puzzle tells a short story about a few villagers. Every villager is matched with **exactly one** item from each category (a bake, a price, a time, and so on), and no two villagers share an item. The clues tell you just enough to work out who has what.

- **Use the grid.** Each small square of the grid compares two categories. Put an **X** in a box when the clues rule a match out, and a **dot** when a match is certain.
- **One dot per row and column.** When you place a dot, cross out every other box in its row and its column inside that square.
- **Carry it across.** If Martha brought the scones and the scones cost \$3, then Martha paid \$3. If Martha brought the scones and the scones did *not* cost \$3, then Martha didn't pay \$3. Copy each discovery into the other squares.
- **Last box standing.** When only one box in a row or column is left without an X, it must be a dot.
- **Read every clue again.** A clue that told you nothing at first often settles everything later.
- **Use the answer table** on the Easy pages and the Expert spreads to write in the final matches.

BEFORE YOU BEGIN

READING THE CLUES

- **“Earlier”, “later”, “more”, “fewer”, “higher”, “farther”** compare two *different* villagers. If Ada arrived earlier than the baker with the red cloth, Ada didn't use the red cloth, and Ada can't have the latest time.
- **Exact gaps.** “Arrived 15 minutes before” or “two places ahead of” gives the exact distance on the list. The times, prices and counts in each puzzle go up in even steps, so check the grid labels.
- **“Either ... or ...”** means *exactly one* of the two is true, never both. So the two things named after “either” and “or” belong to different villagers.
- **“Neither A nor B ...”** gives two separate facts: A isn't it, and B isn't it.
- **“Of A and B, one ... and the other ...”** means A and B are two different villagers, and between them they hold exactly those two items.
- **“The baker who brought the fudge”** is just another way of naming one villager. They may turn out to be someone you already know by name.
- **Order labels.** In “placed first” or “was second in line”, first is at the top: placing higher means a smaller number.

Difficulty. Easy puzzles have three categories of four. Medium have four of four, Hard four of five, and Expert five of five on a two-page spread. Stuck? The hints at the back show one sure first step for every puzzle, and the solutions follow.

WORKED EXAMPLE • THE LOST MITTENS

Four children lost a mitten on the way home from school. The lollipop lady found them all and pegged them on her line.

- 1. Arthur collected it later than the child who lost the red mitten.
- 2. Arthur collected it 15 minutes after Harold.
- 3. Ernest did not lose the green mitten.
- 4. The child who collected it at 3:30 did not lose the blue mitten.
- 5. Arthur collected it 15 minutes before the child who lost the green mitten.
- 6. The child who lost the blue mitten collected it half an hour before Monty.

NAME	MITTEN	COLLECTED
Arthur		
Ernest		
Harold		
Monty		

	MITTEN				COLLECTED

NAME	Arthur							
	Ernest							
	Harold							
	Monty							
COLLECTED	3:30							
	3:45							
	4:00							
	4:15							

SOLVING THE EXAMPLE

- 1 **Clue 6** puts the blue mitten half an hour before Monty, so blue was collected at 3:30 or 3:45. **Clue 4** rules out 3:30. Tick **blue** = **3:45**, and so **Monty** = **4:15**. Cross out the rest of those rows and columns.
- 2 **Clues 2 and 5** make a chain: Harold, then Arthur 15 minutes later, then the green mitten 15 minutes after that. So neither Harold nor Arthur lost the green mitten, and **clue 3** says Ernest didn't either. Only one name is left: **Monty lost the green mitten**.
- 3 Monty came at 4:15, so the chain reads backwards: **Arthur** = **4:00** and **Harold** = **3:45**. That leaves **Ernest** = **3:30**.
- 4 Carry the tick across the grid: blue was collected at 3:45, and Harold came at 3:45, so **Harold lost the blue mitten**.
- 5 **Clue 1**: the red mitten was collected before Arthur's 4:00, so at 3:30 or 3:45. 3:45 is blue, so red is 3:30: **Ernest lost the red mitten**. The only mitten left, yellow, is **Arthur's**.
- 6 Check every clue against the finished grid. Each one holds, and every row and column has exactly one tick.
